**GentleWaves® LED Photomodulation.**  
 The skin fitness system for global skin improvement.

Introducing a breakthrough technology designed to rejuvenate from the inside out. GentleWaves® LED Photomodulation. The device uses an exclusive and sophisticated pulsed technology to deliver gentle, low-intensity LED light set at specially selected proprietary codes.

After undergoing the GentleWaves® program, patients report skin that looks invigorated, with improved texture, tone and elasticity. What's also important is that GentleWaves® is extremely gentle. In contrast to laser and other invasive treatments, it offers the ideal combination of serious science delivered in a gentle procedure.

**GENTLEWAVES® THE SCIENCE THAT UNLOCKED THE CODE TO LED PHOTOMODULATION.**

**GentleWaves® Skin Fitness System™**

**gentle waves® LED Photomodulation®**

The first non-thermal, light-based skin rejuvenation system backed by science.

## Physician and Patient Benefits

**Safe.** Non-thermal and non-ablative.

**Gentle.** Patients report no discomfort or pain.

**Quick.** Treats full face and neck in minutes.

**Easy.** A simple protocol with easy training.

**For all skin types.** Also for sensitive skin.

### Patient Testimonials

*"I had about 6 treatment sessions and started noticing a difference... it's hard to put my finger on it, but my skin has a better, youthful look to it. It felt toned (and) refreshed..."*

*"I can't contain myself from recommending GentleWaves to everyone I meet!"*

**— Nancy, 42 years old, patient**

*"I have tried almost every skin device available and GentleWaves is by far my favorite. My skin looks great. It's simple, fast and doesn't hurt!"*

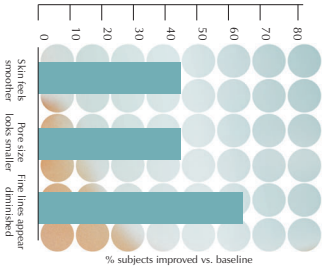

**— Elie Greenick, CT**

## GentleWaves® LED Photomodulation

GentleWaves® was tested on 90 subjects, ages 34 to 77, with photodamaged skin.

After a series of eight treatments, the procedure diminished the appearance of fine lines and wrinkles, and improved skin texture and pore size.

## Clinical Trial

Patients feel and see results in just weeks.

## Visible Results

**Before**  
Female subject, 49, has noticeable fine lines and wrinkles as well as uneven skin pigmentation in the periorbital region.

**After**  
Four months after a series of eight treatments, the appearance of fine lines and wrinkles is greatly reduced. Skin tone is significantly improved and pore size appears smaller.
